COATING OF PROFILED TIMBER
The facade is the visiting card for your building. A wooden facade creates an eye-catching feature of your building. Our new finishing technique will lend a protective coating and high-quality appearance to your wood for many years to come. The wood is coated with ADLER Lacke glazes, which can be diluted with water, and applied to almost all types of profiled wood offered by binderholz. State-of-the-art production systems ensure an even finish and consistent layer thickness.

### Product requirements

- **Minimum board length**: 3000 mm (on request, depending on the profile required)
- **Maximum board length**: 5000 mm
- **Minimum board width**: 60 mm
- **Maximum board width**: 300 mm

### Surface options

- Planed surface
- Textured planed, finely grooved
- Brushed finish
- Unplaned band saw-cut
- Chopped surface
**Colour variations**

**Lignovit Color**

Water-based, opaque and thin-layered wood coating. Very good weather resistance. The coating is protected against blue stain and mould.  
**Application:** Wooden elements outdoors

**Lignovit Platin**

Water-based, thin-layered wood glaze with spectacular, metallic shimmering colour effects created by special pigmentation. Outstanding weather resistance, even degradation when exposed to weathering. The coating is protected against blueness and mould. Generally used when a very long maintenance gap is required or when no maintenance will be provided (natural greying). 
**Application:** Wooden elements outdoors

**Lignovit Deco FS**

Water-based, breathable wood glaze, specifically designed for industrial and commercial use. Excellent resistance to caking. Guarantees good weather resistance, provides basic protection against pollution and ensures improved cleaning. Very even colouring even with large elements. Even degradation, does not flake when exposed to weathering. 
**Application:** Outdoor wood elements, which are not directly exposed to weathering, such as roof soffits, protected wood facades or sub-structures

**Lignovit Terra**

Water-based wood oil based on selected sustainable raw materials for indoor and outdoor use. Natural matt finishes with a velvety, pleasant feel. No addition of solvents and plasticizers, hence an environmental coating. 
**Application:** Wood elements indoors and outdoors
WOODEN ELEMENTS WITH ADLER COATINGS …

• are resistant and offer perfect protection against environmental influences and mechanical loads.

• offer varied design options, thanks to their range of shades and effects to meet the respective needs.

• create a healthy indoor climate and contribute significantly to improving living comfort.

• which have a long shelf life and low maintenance costs optimise the balance.

• ensure a positive ecobalance, as wood, as a sustainable raw material, guarantees sustainability and reduced CO₂.

• do not contain heavy metals, formaldehyde or plasticizers, and are toxicologically harmless.

• can be easily maintained. This ensures that the beauty of the finish is retained over many years to come.

• can generally be largely prefabricated in production plants. Modern production technologies ensure a high level of accuracy, ease of installation and shorter construction times.

PERMANENTLY BEAUTIFUL WITH THE RIGHT CARE

We recommend that the coating is checked annually in order to avoid major consequential damage in the event of initial damage. The regular care of your wood elements is also an essential requirement for the long-term durability of the surface. Different coatings require different maintenance intervals.

Price on request

The look and feel of the different finishes can be experienced in our colour collection folder.
